

How to Read your Water Meter

1

Gallons per minute indicator:

Tells how many gallons per minute are actively flowing through the meter.

2

Flow Indicator: This will display positive ↑ or negative ↓ water flow direction of water going through the meter. The positive flow arrow should be pointing towards the residences.

3

Leak indicator: Leak is when a unit does not sit idle for three consecutive hours within any give 24-hour period, showing continuous or near-continuous flow, and possibly a leak at that location. Residents will see an image of a water drop in this field.

4

Total gallons used indicator: This will display the total number of gallons used. Utility Billing uses the first five digits (reading left to right) for billing purposes.
